Restaurant Calling System

(Waiter Call Guest)

Applied to those restaurants where you get your food at the designated area after you pay for it.

Advantage:

- A. No more waiting in Queue line
- B. Reduction in labour cost
- C. Enhance customer's satisfaction

Keypad Transmitter AC-CTK910

Pager Receiver AC-CTP900

How to Use It?

1. When the customer finishes ordering at the counter, guest will get one receiver, so that he can find one seat to wait.
2. When food is ready, waiter will press the corresponding number on the keypad, then the guest's pager will vibrate, sound or flash, and can take his food by himself at the counter.

Calling Transmitter / Konnector

Calling Receiver

Restaurant Kitchen Calling System

(Kitchen Chef Call Waiter)

When the food is ready, the kitchen chef presses the waiter's number or customer's table number on the keypad, the display panel will broadcast the number, and the waiter's watch will vibrate, then waiter will come to take food for the corresponding customer.

Keypad Transmitter AC-CTK910

Display Receiver AC-S101

Watch Receiver AC-S800

Calling System AC-CTP300

Features

- 999 channels keypad call buttons
- 16 batteries charging slots
- Portable, rechargeable, vibration & buzzer Receiver
- Independent storage memory thereby avoiding data loss
- High receiving sensitivity
- Self testing while power is on
- Beautiful and fashionable designing

Technical Data

Receiver	
Working voltage	DC3.7V (rechargeable battery)
Charging voltage	DC5V
Working frequency	433.92MHz
Standby current	10±5mA
Working current	75±10mA (vibration) 100±20mA (vibration+buzzer)
Receive sensitivity	-107±2dBm
Battery capacity	360mAh
Decoder	Learning code (AM)
Dimension	51*104*10mm

Konnector / Keypad call Button	
Working voltage	DC3.7V/3A power adapter
Working frequency	433.92MHz
Standby current	24±5mA
Transmit current	100±30mH
Encoder	Learning code (AM)
Dimension	1571*234*36mm
